

# Android Assignment

## Name : Image Gallery

This is a prototype app inspired by popular apps like flickr. It has two screens. You have to add and use given “**image.sqlite**” database file into app(which is attached in your mail) with schema as given.

Table Info - “ImageTable”		
Column Name	Type	Use of Column
id	INTEGER	unique id
url	TEXT	Image Url
lk	INTEGER	Like Count
dislike	INTEGER	Dislike Count
click	INTEGER	Click Count
updated_at	DATE	Last Updated Time

### Screen 1) List of all image :

In first screen(**Figure 1.0**) as shown, using image url, which should be read from Database (‘**url**’ column, pre-filled in ‘**image.sqlite**’). Through web service calls, respective resultant image should be displayed on the screen. Keeping quality of the images intact.

<div><div></div><div></div></div> <i>IMAGE 1</i>	
<i>IMAGE 2</i>	<i>IMAGE 4</i>
<i>IMAGE 3</i>	
<i>IMAGE 5</i>	<i>IMAGE 6</i>
	<i>IMAGE 7</i>
<i>IMAGE 8</i>	<i>IMAGE 9</i>
<i>IMAGE 10</i>	
<i>IMAGE 1</i>	<i>IMAGE 3</i>
<i>IMAGE 2</i>	
⋮	

**Figure 1.0**

### **Note:**

- 1.) Images list should be sort by **click** (Most clicked, will be on the top).
- 2.) List should be auto sort when you come back to this screen.
- 3.) Screen must have **Unlimited Scrolling** by repeating given 10 Image Url.

## Screen 2) Image Info :

In this screen( Figure 1.1) you have to show image with last updated time. Whenever user like or dislike the image by clicking respective buttons, “**updated\_at**” (Column in ImageTable) should be update with ‘current date’.

Figure 1.1

### Note :

- 1) You have to count how many times, like and dislike buttons are clicked for this image.
  - 2) You have to display like and dislike button with number
- Example: Like(2)

### Solution evaluation key points :

- Use of a build system like Gradle is mandatory.
- Use ‘Volley’ Library to fetch Image from server.
- We are looking for your ‘Object Oriented Principles’ concept along with an understanding of Android and its internals.
- We are not looking for a very jazzy UI. A functional UI is what you should be shooting for.
- You may use 3rd party libraries, where necessary, with a clear explanation of why, and what it does.

### Expected Output

- Working apk.
- Source Code distribution: either zipped or via a link to a repository where we can access your source code
